Cisco 5921 Embedded Services Router

The Cisco® 5921 Embedded Services Router (ESR) is a Cisco IOS software router. It is designed to operate on small, low-power, Linux-based platforms to extend the use of Cisco IOS® Software into extremely mobile and portable communications systems.

The Cisco 5921 ESR is part of the Cisco 5900 Series ESRs, all optimized for mobile and embedded networks that require IP routing and services. The flexible, compact form factor of the Cisco 5900 routers, complemented by Cisco IOS Software and Cisco Mobile Ready Net capabilities, provides highly secure data, voice, and video communications to stationary and mobile network nodes across wired and wireless links.

Low-Cost Vehicle Communications Systems

The Cisco 5921 ESR complements the Cisco 5915 and 5940 ESR hardware routers, providing integrators with a cost-effective solution for addressing smaller, highly-integrated applications. The Cisco 5921 ESR can be combined with system-specific applications onto a single, small, low-power hardware solution.

Portable Communications Devices

By not restricting the product developer to a specified form factor, the Cisco 5921 ESR offers integrators creative flexibility to design hardware to meet unique market requirements. The router targets low-power systems, making it ideal for use in portable, battery-powered devices.

Sensors

The Cisco 5921 ESR's network optimization capabilities support the development of security-protected sensors deployed in self-forming, self-healing, infrastructure-less networks. It provides immediate connection with no pre-configuration of peers required; no need for connectivity to a centralized network; and reach beyond the range of a fixed network.

Key Features and Benefits

The Cisco 5921 ESR is part of the Cisco Internet of Things (IoT) portfolio, designed to create a highly secure, simple, and reliable network. It can enable connections to devices, applications, and people in a way that reduces disruption while adding value to each connected service.

Table 1 outlines the features and benefits of the Cisco 5921 ESR. Table 2 outlines the product's software specifications. Table 3 highlights the router's platform specifications.

Table 1. Features and Benefits of Cisco 5921 ESR

Feature	Benefit
Cisco Mobile Ready Net	Deploy the Cisco 5921 in mission-critical mobile communications to provide: • Transparent access of mission-critical voice, video, or data information • Infrastructure-less networking: Reaching beyond the range of a fixed network • Self-forming temporary ability: Immediate connection with no pre-configuration of peers required, eliminating the need for connectivity to a centralized network
Platform Support	Broad support for commonly available platforms offers maximum flexibility
Network Optimization	The following technologies optimize the utilization of limited bandwidth links, increasing network connectivity and improving user experience: • IP Multiplexing - fully utilize available bandwidth by optimizing transmission packet size • QoS - help ensure the highest priority data is transmitted when link conditions degrade • Radio-aware routing - actively monitor link conditions to increase connectivity and reduce packet loss • Ad-hoc networking - dynamically configure networks to allow authorized nodes to move without requiring manual intervention or pre-configuration • Application Visibility and Control (AVC) - improve user experience with application-level classification, monitoring, and traffic control.
Network Security	Protect against malicious attacks and unauthorized access with advanced security technologies such as authentication, identity management, security protocols, secure connectivity, and integrated threat management
Cisco IOS Embedded Event Manager (EEM)	Cisco IOS EEM is a distributed and customized approach to event detection and recovery offered directly in a Cisco IOS Software device. It offers the ability to monitor events and take informational, corrective, or any desired EEM action when the monitored events occur or when a threshold is reached

Product Specifications

Table 2. Software Specifications for Cisco 5921 ESR

Features	Feature Description	Cisco IOS Software Image Support	
		Enterprise Base	Advanced Enterprise
Cisco IOS Service Advertisement Framework (SAF)	As the variety and number of network services grows, providing timely and reliable awareness of these services starts to play a more significant role in increasing productivity and efficiency. As networks grow, so too do the services that the devices on these networks offer. Protocols responsible for the service advertisement need to scale to handle this increased load. Cisco IOS SAF provides this function.		X
MLD Proxy	MLD Proxy enables a device to learn proxy group membership information and simply forward multicast packets based upon that information.		X
Routing Protocols	• Routing Information Protocol (RIP) Versions 1 and 2 • RIPv2 • Open Shortest Path First (OSPF) • Enhanced Interior Gateway Routing Protocol (EIGRP)-IP • Border Gateway Protocol (BGP) • Cisco Discovery Protocol • IP Policy Routing • IP Multicast Protocol Independent Multicast (PIM) Versions 1 and 2 • Internet Group Management Protocol (IGMP) Versions 1, 2, and 3 • IP Multicast Load Splitting • Cisco Group Management Protocol (GMP)	X	X
VLANs	Up to 32 VLANs supported per router	X	X
IPv4	IPv4 support	X	X

Features	Feature Description	Cisco IOS Software Image Support	
		Enterprise Base	Advanced Enterprise
IPv6	• IPv6 routing and Cisco Express Forwarding switching • IPv6 QoS • IPv6 tunneling support • Cisco IOS Zone-Based Firewall for IPv6 traffic		X
Encapsulations	• Point-to-Point Protocol (PPP) • PPP over Ethernet (PPPoE) client and server for Fast Ethernet • 802.1q VLAN trunking support • Generic routing encapsulation (GRE)	X	X
Additional Protocol support	• Telnet • Asynchronous tunneling • Real-time Transport Protocol (RTP) header compression • Secure Shell (SSH) Protocol Client and Server Version 2	X X	X X
Mobility			
Radio-Aware Routing	• Optimizes IP routing over fixed or temporary radio networks • Factors radio link metrics into route calculations • Immediately recognizes and adapts to changes in network neighbor status • Dynamic Link Exchange Protocol (DLEP) • Router Radio Control Protocol (R2CP) • RFC 5578 (authored by Cisco)		X
Mobile Ad Hoc Network	OSPFv3 enhancements for mobile temporary networks		X
Mobile IP	Mobile IP and Cisco Mobile Networks in Cisco IOS Software: • Home agent and mobile router redundancy • Mobile router preferred interfaces • Mobile router reverse tunneling • Mobile router asymmetric links • Mobile router static and dynamic networks • Static co-located care-of address • Authentication, authorization, and accounting (AAA) server • Cisco Mobile Networks Network Address Translation (NAT) Traversal over Mobile IP • Support for Mobile IP tunnel templates, allowing configuration of IP Multicast and IPsec on Mobile IP tunnels • Mobile IP foreign agent local routing optimization		X
Security			
Suite-B support	Suite-B support in Cisco IOS software cryptography, including Suite-B-GCM-128, Suite-B-GCM-256, Suite-B-GMAC-128, and Suite-B-GMAC-256 as described in RFC-4869		X
Authentication	• Route and router authentication • Password Authentication Protocol (PAP) • Challenge Handshake Authentication Protocol (CHAP) • Microsoft CHAP (MS-CHAP) local password • IP basic and extended access lists • Time-based access control lists (ACLs)	X	X
Secure Connectivity	Secure collaborative communications with Group Encrypted Transport VPN, Dynamic Multipoint VPN (DMVPN), or Enhanced Easy VPN		X
Integrated Threat Control	Responds to sophisticated network attacks and threats using Cisco IOS Intrusion Prevention System (IPS), Cisco IOS Firewall, Cisco IOS Zone-Based Firewall, Cisco IOS Content Filtering, and Flexible Packet Matching (FPM)		X
Identity Management	Intelligently protecting endpoints using technologies such as AAA and public key infrastructure (PKI)		X

Features	Feature Description	Cisco IOS Software Image Support	
		Enterprise Base	Advanced Enterprise
Security Protocols	• IPsec • SSL/TLS • SRTP • 3DES • AES • IKE		X
Qos			
Traffic Management	• QoS • Generic traffic shaping • Class-based Ethernet matching and mobile access routing (802.1p class of service [CoS]) • Committed access rate • Flow-based Weighted Random Early Detection (WRED) • Class-Based Weighted Fair Queuing (CBWFQ) • Low Latency Queuing (LLQ) • Priority Queuing • Weighted Fair Queuing (WFQ) • Link fragmentation and interleaving (LFI) • Traffic Policing Resource Reservation Protocol (RSVP)	X	X
Voice			
Unified communications	Cisco Unified Communications Manager Express • With support for up to 25 phones		X
Management			
Management Services	• Simple Network Management Protocol (SNMP) Versions 2 and 3 • Telnet • RADIUS • TACACS+ • Cisco Service Assurance Agent • Syslog • Response Time Reporter • Network Time Protocol (NTP) Client and Server • Trivial File Transfer Protocol (TFTP) client and server • Dynamic Host Configuration Protocol (DHCP) client and server • DHCP relay • Hot Standby Router Protocol (HSRP)	X	X
Tool Command Language (Tcl) Scripts	Tcl script support	X	X
Address Conservation	• NAT Many-to-One (Port Address Translation [PAT]) • NAT Many-to-Many (Multi-NAT) • DHCP Client Address Negotiation • Easy IP Phase I	X	X

Table 3. Platform Specifications for Cisco 5921 ESR

Features	Feature Description
Processor	• x86 - e.g., Intel Atom and Intel Core i3/i5/i7
Memory	• 512 MB minimum
Disk Space	• 300 MB minimum
Operating System	• glibc compiled Linux

Service and Support

Realize the full business value of your technology investments with smart personalized services from Cisco and our partners. Backed by deep networking expertise and a broad ecosystem of partners, Cisco Services can enable you to successfully plan, build, and run your network as a powerful business platform. Whether you are looking to quickly seize new opportunities to meet rising customer expectations, improve operational efficiency to lower costs, mitigate risk, or accelerate growth, we have a service that can help you.

For more information about Cisco services, refer to Cisco Technical Support Services or Cisco Advanced Services.

Cisco Capital

Cisco Capital can help you acquire the technology you need to achieve your objectives and stay competitive. We can help you reduce CapEx. Accelerate your growth. Optimize your investment dollars and ROI. Cisco Capital financing gives you flexibility in acquiring hardware, software, services, and complementary third-party equipment. And there's just one predictable payment. Cisco Capital is available in more than 100 countries. Learn more.
